LAB RECORD

Insurance Claim Automation Suite - Workflows

Detail	
Name	THARUNIKKA A
Register Number	240701564
Course / Section	B E CSE
Platform	Zoho Creator
Application	Insurance Claim Request & Processing Management
Assignment	Assignment 04 - Workflows

1. Aim

To build automations in Zoho Creator for the Insurance Claim Request application using Workflow options - Form Workflows, Schedule, Approval, Blueprint and Functions - so that policy details are filled automatically, wrong entries are blocked, and claims move through a controlled process.

2. Procedure

2.1 Prerequisite fields

1. Checked that Claim_Request_Form has Status, Settlement_Status, Documents_Complete, Reminder_Count, Manual_Followup and Policy_Deductible, and that the Policies master form has sample policies.

2.2 Workflows created

Workflow	Type and trigger	Purpose
Autofill_Policy_Details	Form workflow: created or edited, on user input of Policy_Details_Lookup	Fills policy details from the Policies form
Block_Future_Incident_Date	Form workflow: created, validations on form submission	Rejects a future Date_Of_Incident
Block_Negative_Numbers	Form workflow: created, validations on form submission	Rejects zero or negative amounts
Validate_Repair_Cost_And_Depreciation	Form workflow: created or edited, validations on submission	Checks repair cost and the 0-50 depreciation range
Load_Claim_Guidelines	Form workflow: created, on load of the form	Shows the claim process guidelines
Daily_Missing_Document_Reminder_Schedule	Schedule: daily at 10:00	Reminds claimants about missing documents (max 5)
HighValue_Claim_Approval	Approval: on review	Sends high-value claims to the senior approver

Workflow	Type and trigger	Purpose
Claim_Lifecycle_Blueprint	Blueprint: on form submission	Controls the stages from Submitted to Settled / Rejected

2.3 Steps

1. Opened Workflow in the app and created each form workflow with the trigger shown above, then wrote the Deluge script given in the Output section.
2. Created the schedule for the daily run, the approval for high-value claims, and the blueprint with Status as the stage field and a mandatory comment on transitions.
3. Tested the workflows by submitting sample claims in the live form.

3. Output

Workflow list of the application.

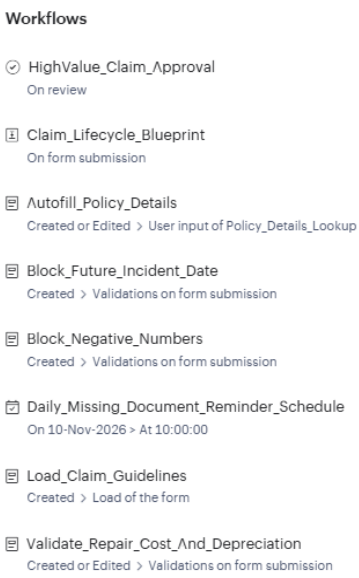

Figure 1: Workflows of Insurance Claim Request & Processing Management

Deluge scripts used in the workflows. Field names of the Policies form are written as used in the application.

Autofill_Policy_Details

Trigger: created or edited, user input of Policy_Details_Lookup.

```
if(input.Policy_Details_Lookup != null)
{
 pol = Policies[ID == input.Policy_Details_Lookup];
 input.Policy_Number = pol.Policy_Number;
 input.Policy_Sum_Insured_Lakhs = pol.Sum_Insured;
 input.Policy_Deductible = pol.Deductible;
}
```

Block_Future_Incident_Date

```
if(input.Date_Of_Incident > zoho.currentdate)
{
 alert "Date of Incident cannot be in the future.";
 cancel submit;
}
```

Block_Negative_Numbers

```
if(input.Claim_Amount_Requested <= 0)
{
 alert "Claim amount must be greater than zero.";
```

```
 cancel submit;
}
if(input.Estimated_Repair_Cost < 0)
{
 alert "Estimated repair cost cannot be negative.";
 cancel submit;
}
```

Validate_Repair_Cost_And_Depreciation

```
if(input.Depreciation_Percent < 0 || input.Depreciation_Percent > 50)
{
 alert "Depreciation must be between 0 and 50 percent.";
 cancel submit;
}
if(input.Estimated_Repair_Cost < 0)
{
 alert "Estimated repair cost cannot be negative.";
 cancel submit;
}
```

Load_Claim_Guidelines

Trigger: created, on load of the form.

```
input.Claim_Process_Guidelines_Display = "<b>Claim process</b><ul>"
 + "<li>Keep all original bills and estimates.</li>"
 + "<li>A surveyor will contact you within 48 hours.</li>"
 + "<li>Do not repair the vehicle before inspection.</li></ul>";
```

Daily_Missing_Document_Reminder_Schedule

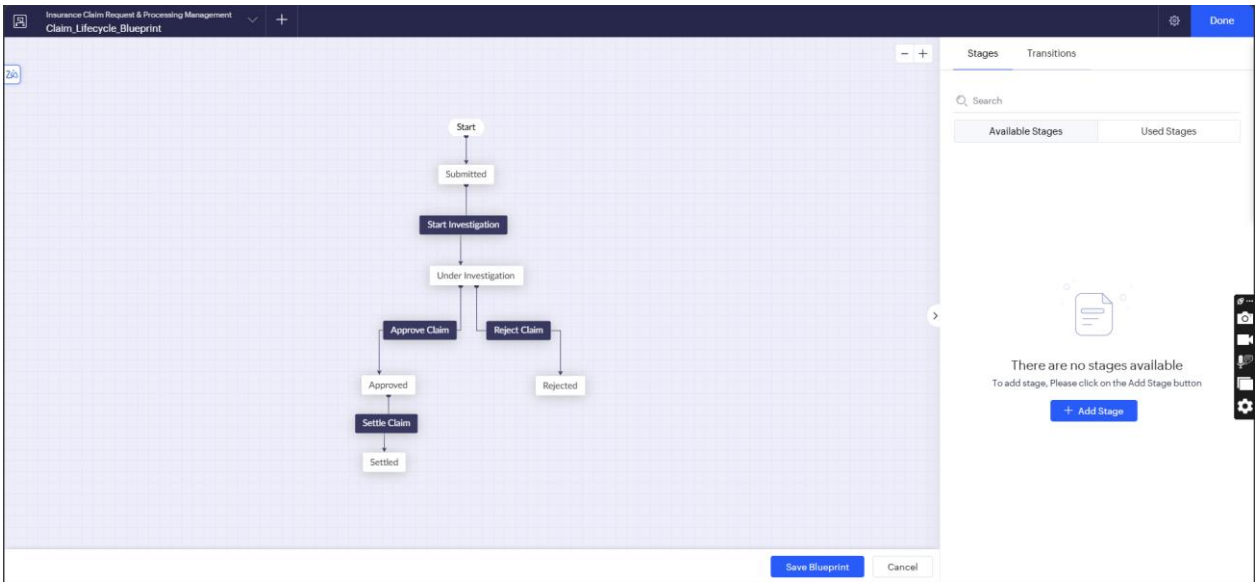

Frequency: daily at 10:00.

```
pending = Claim_Request_Form[Documents_Complete == false && Reminder_Count < 5];
for each r in pending
{
 sendmail [ from: zoho.adminuserid  to: r.Email_Address
   subject: "Documents pending for " + r.Claim_Reference_ID
   message: "Please upload your missing documents." ]
 r.Reminder_Count = r.Reminder_Count + 1;
 if(r.Reminder_Count >= 5) { r.Manual_Followup = true; }
}
```

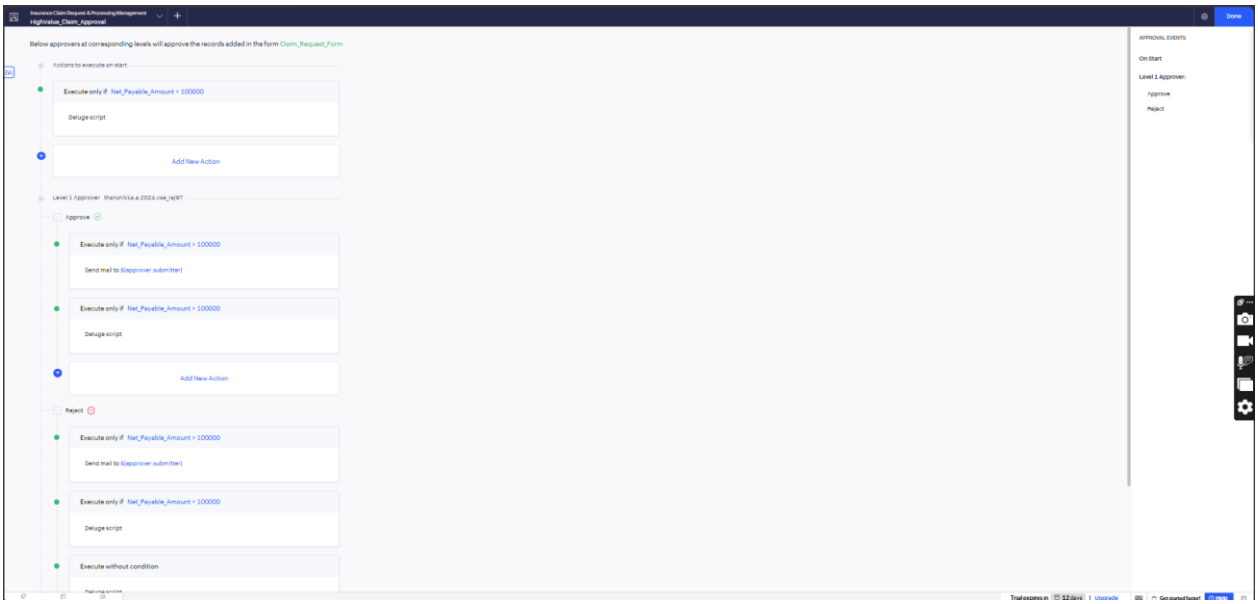

generateSettlementLetter (function)

Called from a workflow with: thisapp.generateSettlementLetter(input.ID);

```
void generateSettlementLetter(int claimID)
{
 rec = Claim_Request_Form[ID == claimID];
 if(rec.Claimant_Name.first_name == null || rec.Net_Payable_Amount == null)
 { info "Skipped for " + claimID; return; }
 sendmail [ from: zoho.adminuserid  to: rec.Email_Address
   subject: "Settlement Letter - " + rec.Claim_Reference_ID
   message: "Claim " + rec.Claim_Reference_ID + " is settled for Rs. " + rec.Net_Payable_Amount ]
}
```

Claim_Lifecycle_Blueprint

HighValue_Claim_Approval

4. Result

The workflows listed above were built in Zoho Creator. The form workflows fill the policy details and block wrong entries, the schedule sends daily reminders, and the approval and blueprint control the claim stages.
